PROFILE

Senior full-stack engineer with 7+ years building B2B SaaS products at one HR-technology company. Owns features end to end, from product specification through implementation and production operations, across the asynchronous video-interview, online-assessment and proctoring platform recruiters and candidates use to hire. Works across frontend architecture, backend systems, media processing, AI-assisted scoring and cloud infrastructure, including a cross-cloud migration from AWS to Azure. Now open to **senior full-stack and product-engineering roles**.

PROFESSIONAL EXPERIENCE

Full-Stack Engineer (started as Front-End Web Developer)

Apr 2019 – Aug 2026

ASTRNT (astrnt.co) · HR-technology company. Asynchronous video-interview and online-assessment platform for hiring

Full-time · Front-End Web Developer from Apr 2019, promoted to Full-Stack Engineer in Apr 2020 · principal contributor across the product line.

PLATFORM MODERNISATION

- **Led the modernisation of the flagship recruiter platform onto Next.js 16, React 19 and TypeScript.** Replaced the legacy Laravel and React dashboard without stopping the business, shipping **18 feature areas in about six months** (onboarding, bulk candidate import, credit and billing, an assessment builder, review and reporting, AI CV scoring, candidate-to-job matching) and **cutting the front-end bundle by about 92%** through code splitting and a dependency audit.

ARCHITECTURE & SCALABILITY

- **Architected the dual-database migration behind the rebuild**, so data moved between the old and new schemas with **no cut-over outage** and per-company control. Tracked feature parity against V1 so completeness was auditable rather than assumed.
- **Diagnosed and resolved a production scalability incident at 2,500 concurrent candidates**, identifying N+1 queries, indexing gaps, row-lock contention and synchronous third-party calls in the request path; fixed it with query rewrites, an index and lock audit, and by moving scoring workloads onto background queues.

MEDIA & EXAM INTEGRITY

- **Engineered the exam-integrity and media layer** that lets companies run secure remote exams: camera-based proctoring, screen recording, multi-tab detection, copy and paste blocking, mobile lockout and consent gating, plus chunked video upload and real-time quality checks that warn a candidate to retake rather than silently submit unusable footage.

CLOUD MIGRATION

- **Migrated the company's infrastructure from AWS to Azure** as a zero-downtime move: per-environment production builds, PM2 process configuration, and re-homing the data Azure has no direct equivalent for, object and video storage onto **Azure Blob** and the **DynamoDB activity log onto MongoDB**. Ran the Laravel 5.4 to 5.8 and PHP 7.1 to 7.4 upgrade as a parallel track, so the live monolith kept improving without freezing feature delivery.

SELECTED ENGINEERING & PRODUCT WORK

- **CV and AI pipeline:** upload, parsing and structured extraction into recruiter-ready data, feeding AI CV scoring and candidate-to-job matching, plus Azure Speech marking of recorded video answers and English fluency.
- **QnA candidate platform**, the largest codebase I owned: the full question-type set behind one unified session and timer engine, with a self-paced mode and the questionnaire-style screening flow.
- **Multi-product and enterprise deployments:** one Laravel and Nuxt codebase scaled into Kognisi.id, Popskul and CDC, with payments, SSO and a Tableau BI connector, plus co-branded sites for BCA, Google, Deloitte and Gojek.
- **Job-market data ingestion:** built the pipeline behind the job board, reverse-engineering GraphQL and JSON APIs, authenticated sessions and redirect flows.
- **Product definition:** authored 19 product requirement documents, 30 design use cases and the PRD template the team adopted.

Full-Stack Developer (Freelance)

Aug 2019 – Dec 2019

langgan.id · SaaS website-builder platform with a visual editor

- **Built and maintained langgan.id, a SaaS website builder** that lets non-technical users create and manage their own sites through a visual editor. Worked across the React-based builder editor and the Laravel backend (user management, billing, APIs), covering feature development, debugging, code review and performance tuning.

Fullstack Programmer

Sep 2018 – Apr 2019

PT. Rumah Sakit Padjadjaran, "Edudok" (Telkom Incubator)

- **Built core modules for a healthcare platform** (contact management, SMS blast, reservation, screening) serving 6 clinic clients. Built with Lumen (PHP) and AngularJS; applied OOP and SOLID during refactoring to reduce technical debt across all clients.
- **Helped steer the product's pivot from B2C to B2B**, rebuilding the landing page and the core architecture around enterprise clinic clients.

PT Wahana Saabiq

- **Built a back-office web and mobile app** (Ionic front-end + CodeIgniter REST API) for PT Wahana Saabiq’s IT division, delivered on time with full documentation.

IT Developer, Online Division

Aug 2016 - Nov 2017

PT. Galamedia Perkasa (online & print media)

- **Rebuilt the company’s news portal** (galamedia.pikiran-rakyat.com) and maintained the sports site galapersib.com, with a new frontend, a custom CMS and a Laravel backend, plus the article-posting flow and a news feed that auto-shared every new or updated article to Galamedia’s official social channels. Delivered an HR-management (employee) system on time with full documentation.
- **Diagnosed and fixed critical TCP, network and server-load issues** on a high-traffic media platform.

Part-Time Programmer, Manufacturing Division

Apr 2016 - Jul 2016

CV Cihanjuang Inti Teknik

- **Built a Manufacturing Resource Planning (MRP) web app** (Laravel) for the manufacturing division, delivered on time with full documentation.

TECHNICAL SKILLS

Core engineering:	TypeScript · JavaScript (ES6+) · React · Next.js · Node.js / Express · Laravel · PostgreSQL · MySQL · REST API · Azure · AWS
Domain & systems:	Data ingestion and web scraping (GraphQL / JSON APIs, authenticated sessions, redirect flows) · Media and real-time (MediaRecorder / WebRTC, FFmpeg, Azure Media Services, chunked video upload) · AI and scoring (Anthropic, OpenAI, Gemini, Azure Speech, VRA psychometric, TensorFlow.js) · Payments (Stripe, Midtrans) · SSO / OAuth · Engineering practice (OOP, SOLID, design patterns, PRD and design use cases, code review, Cypress E2E, Git, Jira, Confluence, Azure DevOps)
Working knowledge:	NestJS · Prisma · Vue 2 / Nuxt 2 · MongoDB · Redis · Elasticsearch · DynamoDB · Docker · Kubernetes · Redux · Tailwind CSS · shadcn/ui
Additional:	PHP (Lumen, CodeIgniter) · Python / Flask · C# / .NET · Java · AngularJS / Ionic · SQL · Webpack

EDUCATION

S.Kom., Informatics	Universitas Jenderal Achmad Yani (UNJANI), Cimahi · graduated 2017 Concentration: Artificial Intelligence and Data Mining.
---------------------	---

AWARDS & RESEARCH

- ASTRNT awards** (2025 & 2026): “Set Objective, Move Fast” (Q3 2025) and “We Do Excellence & Personal Growth” (No. 002/CERT/ATI/I/26), both for delivering significant results and outstanding personal excellence. 2025 certificate → 2026 certificate →
- Published conference paper and speaker** (SNATI 2017): “Identifikasi Suara Pengontrol Lampu Menggunakan MFCC dan Hidden Markov Model” (co-authored with Esmeralda C. Djamal & Rezki Yuniarti). View publication →
