EMPLOYMENT OBJECTIVE

Senior Full-Stack Software Engineer seeking to contribute to the development of scalable, high-performance web platforms, with a focus on media-intensive and assessment-driven systems. Bringing strong end-to-end ownership across frontend architecture, asynchronous backend systems, and cloud infrastructure, with a proven track record of optimizing performance, reliability, and production stability.

EDUCATION

UNIVERSITAS JENDERAL AHMAD YANI, Cimahi, Indonesia

Aug 2017

Sarjana Teknik Informatika. Concentration: Artificial Inteligent and Data Mining

GPA 3.13

EXPERIENCE

ASTRNT

Apr 2019 - Present

ASTRNT is a hiring management platform designed to streamline end-to-end recruitment workflows. The platform focuses on asynchronous video interviews and structured candidate assessments, enabling companies to evaluate talent efficiently without real-time scheduling constraints.

ASTRNT supports multi-stage hiring pipelines, including talent pooling and talent matching, allowing recruiters to manage candidates across different stages of the recruitment lifecycle. The assessment system accommodates multiple question formats, such as video interview, multiple-choice questions (MCQ), free-text responses, and document uploads, enabling both technical and non-technical evaluations.

The platform is built to scale for high-volume recruitment, helping organizations quickly identify best-fit candidates while reducing time-to-hire and operational overhead.

Fullstack Web Developer (Engineer)

Apr 2020 - present

- Built an end-to-end **screen recording proctoring system** with chunked streaming and secure media handling.
- Generated **PDF-based proctoring reports** embedded in the hiring manager dashboard for candidate review.
- Led full-stack delivery and frontend architecture across modern JS frameworks and Laravel-based backends.
- Built a scalable **media-heavy proctoring system** with chunked uploads, real-time updates, and PDF reporting.
- Drove major performance gains, cutting frontend bundle size by **~92%**, and managed production systems on **Azure + Nginx**.
- Created an internal **job board (Popskul)** with automated ingestion via **Puppeteer-based scraping**.
- Delivered **async Excel & secure PDF reporting** for hiring managers.

Front End Developer (Engineer)

Apr 2019 - Apr 2020

- Built and maintained a **job management dashboard** with complex, multi-step forms for configuring hiring workflows and assessments.
- Implemented **candidate interview flows** using secure access codes, enabling candidates to enter and complete interviews without accounts.
- Designed and implemented **time-based question and answer handling**, enforcing strict duration rules during candidate assessments.
- Developed a **WYSIWYG form builder** for job dashboards, allowing recruiters to create and manage rich-text assessment content dynamically.
- Built a **WYSIWYG email editor**, enabling customizable email templates for candidate communication directly from the platform.
- Ensured form reliability and state consistency across long user sessions and high-interaction interfaces.

- Collaborated closely with backend teams to integrate APIs and ensure seamless frontend–backend data flow.

Langgan.id

Aug 2019 - Dec 2019

e-commerce enabled in Indonesian (startup)

Front End Developer:

- Building a template based for user interface based on client request

PT. Rumah Sakit Padjadjaran, Bandung

Sept 2018 – Feb 2019

A clinic networking company of primary health care (basic level) especially in the West Java region. Edudok is a product of Telkom Incubator. Edudok helps primary health care for managing Contact Management System that reported to BPJS. The Clients are Klinik Padjadjaran Jatinangor, Klinik Padjadjaran Leles, Klinik Kiara Husada, Klinik Itenas, Klinik Sehat Margaasih, and Klinik Kimia Farma Dago.

Fullstack Programmer, Edudok IT Division.

Programmer Front End and Back End for Edudok Product.

- Analyzed the web requirements and specification based on user needs
- Explored Core System (Services) of Edudok
- Explored Framework Tools for front-end development (Angularjs)
- Explored Framework Tools for back-end development (Lumen(PHP))
- Implemented Application using Lumen as back-end and Angularjs for front-end
- Created Datakontak as core Contact Management module features back-end services and front-end (Contact Management System)
- Improved SMSBlast module features back-end services and front-end (Contact Management System)
- Improved Reservation module features back-end services and front-end (Contact Management System)
- Created Skrining module features back-end services and front-end (Contact Management System)
- Improved Diary Kesehatan modules front-end (Pagelanding)
- Optimized Datakontak modules
- Explored Framework Tools for front-end development (Reactjs,Vue)
- Explored Framework Tools for back-end development (Node.js, Golang, Java)
- Explored Dependencies Tools for mem-cache management (Redis)
- Implemented Application using Reactjs for front-end and using last services
- Analyzed a few other tools and technologies (Microservices) to compared with existing site
- Created new face for Edudok from B2C (Business to Customer) to B2B (Business to Business) back-end and front-end (Pagelanding, Edudok.id)

Part-Time Programmer Divisi IT

Dec 2017 – April 2018

Developed Web and Mobile Application for *PT Wahana Saabiq*, *Divisi IT* to give information about Back Office REST API using tool front-end Ionic(Angularjs) back-end CI

PT. Galamedia Perkasa, Bandung

Aug 2016 – Nov 2017

An online and print media company who lead in Greater Bandung. Galamedia online division is the new division, the reader is very global and growing so fast. Client and Partners come from various backgrounds: Mistubishi, Government, Hotels, etc.

IT Dev Online Division

Aug 2016 – Oct 2017

Web Prog for Galamedianews.com, give any solution about project.

- Maked new image for Galamedia Online (website and content management system)
- Maked Sistem Informasi Pegawai for managing human resource using Framework Tools (Laravel(PHP)).
- Maked Concolation for Galamedia Server and managed Network load error on Website
- Explored Solution for TCP – Network Error on Website.

Developed Web Application for *CV Cihanjuang Inti Teknik*, Divisi Manufacturing to give information about Manufacturing Resource Planning

- Analyzed the web requirements and specifications based on user needs
- Analyzed a few other sites to compared with the existing site
- Explored Framework Tools (PHP) Laravel to develop the application
- Implemented the application using Laravel
- Completed the application on time
- Created *laporan antara* and user manual

ADDITIONAL INFORMATION

- Highly proficient in the following technologies :
 - Operating Systems : LINUX (UBUNTU), WINDOWS
 - Databases : MongoDB, MySQL, PostgreSQL, ElasticSearch
 - Application Development and Programming Technologies : Javascript, PHP, Python, Java, Node, REST API Services
 - Framework Toolkit : ReactJS, Vue, Nuxtjs, Vanilla Javascript.
 - Web Server tools: Apache, Nginx
 - Artificial Inteligent and Data Mining Method : Hidden Markov Model, LVQ Neural Network, Genetic Algorithm
- Was awarded for Seminar Nasional Aplikasi Teknologi Informasi as Speaker for [Identifikasi Suara Pengontrol Lampu Menggunakan Mel-Frequency Cepstral Coefficients dan Hidden Markov Model](#)
- Member of *Kaderisasi* Division (2013-2014) in UNJANI Informatics Engineering Community, a community of students majoring in Informatic at UNJANI, managed in recruiting new member of UNJANI Informatics Engineering Community.
- Member of UNJANI Outbound Commission (20015-2016), commission of UNJANI new admissions, successfully managed around 400 new students in UNJANI.
