

ANGGA KERSANA MUNGgaran

Senior Full-Stack Engineer · Product-minded · 7+ years in HR technology (B2B SaaS)

Cimahi, West Java, Indonesia · +62 813-2423-0307 · anggakersana@gmail.com · portfolio: anggakersana-dev.vercel.app · linkedin.com/in/angga-munggaran · github.com/anggakersanamunggaran

PROFILE

Product-minded senior full-stack engineer with 7+ years at one HR-technology company (ASTRNT). The software I built is what recruiters and job applicants actually use to hire: asynchronous video interviews, online proctoring and anti-cheat, psychometric and AI-assisted scoring, and CV parsing. I worked across the whole product line, including the core recruiter platform, the QnA candidate assessment app, AI scoring and matching, a three-product white-label family (Kognisi.id / Popskul / CDC), enterprise landing pages, and a cross-cloud migration from AWS to Azure. I then led the flagship platform's modernisation onto Next.js and TypeScript. I define the work by writing the product specifications, implement it, and keep it running in production. Now open to **senior full-stack and product-engineering roles**.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer (started as Web Developer)

May 2019 – Aug 2026

ASTRNT (astrnt.co) · HR-technology company. Asynchronous video-interview and online-assessment platform for hiring

Full-time · principal contributor across the product line: roughly 11,700 commits, 35 repositories, 1,661 Jira tickets held (93% completed).

- **Built the modern flagship recruiter product, “ASTRNT Dashboard V2”, on Next.js 16 / React 19 / TypeScript.** Replaced the legacy Laravel and React recruiter dashboard so the company could modernise its core product without stopping the business. Shipped **18 feature areas in about six months**: onboarding, bulk candidate import, credit and billing, an assessment builder, review and reporting, AI CV scoring and candidate-to-job matching, while the old system stayed live for customers.
- **Made the risky change-over safe and measurable.** Wrote a dual-database migration so data moved between the old and new schemas with **no cut-over outage** and per-company control, and tracked feature parity against V1 so the rebuild's completeness was auditable rather than assumed.
- **Defined the product as well as building it.** Authored **19 product requirement documents, 30 design use cases** and the PRD template the team adopted, then implemented the features those documents specified. This let one person own a feature from spec to shipped code.
- **Helped build the QnA web candidate platform**, the application every invited candidate opens to sit an interview or assessment. It ran from 2019 to 2026 and became my largest codebase at about **2,200 commits**, more than any other contributor on a repository of over twenty authors.
- **Expanded the question formats and modes the platform supports.** Built multiple choice with single or multiple answers (MCQ), free text (FTQ), rating scale (RSQ), recorded video-interview answers, media questions and document upload questions, each with its own flow and validation. Added a self-paced session mode and a unified session and timer engine that drives every question type, so candidates get one consistent experience no matter which format an assessment uses.
- **Co-built the questionnaire-style screening flow**, including a self-questionnaire for work values and competencies linked to a job. Two backend teammates opened the feature branches and I owned the candidate-facing UX end to end and merged the work into release. That pairing was my normal way of working, so part of my contribution sits inside a shared commit history rather than under my own name alone.
- **Built the exam-integrity layer that lets companies run secure remote exams.** Camera-based online proctoring and screen recording, with multi-tab detection, copy/paste blocking, mobile lockout and explicit consent gating. Hardened across browsers and weak connections, and added real-time video-quality checks that warn a candidate to retake instead of silently submitting unusable footage.
- **Fixed a production incident at 2,500 concurrent candidates to keep assessments working.** Traced the database saturation to N+1 queries, missing indexes, row-lock contention and third-party calls in the request path, then fixed it with query rewrites, index and lock audits, and moving scoring into background queues.
- **Replaced manual review with AI-assisted scoring.** Delivered automatic marking of recorded video answers and English fluency using Azure Speech, plus a VRA psychometric assessment, so reviewers no longer scored every answer by hand.
- **Built the CV and document pipeline, my largest engineering workstream.** Upload, parsing and structured extraction turn applicant CVs into recruiter-ready data. The pipeline later fed the AI CV scoring and the candidate-to-job matching engine.
- **Led the AWS to Azure cloud migration** for the company's infrastructure consolidation. Set up the per-environment production builds for each web app, configured PM2 on the servers, and re-homed the data Azure has no direct equivalent for: object and video storage onto **Azure Blob** and the **DynamoDB activity log onto MongoDB**, with no service downtime.
- **Built Kognisi.id and turned one codebase into three commercial products.** A shared Laravel and Nuxt platform became **Kognisi.id**, a certified online-course marketplace with payments, SSO, SEO-friendly course URLs and a Tableau BI connector, plus two white-labels: **Popskul**, a fresh-graduate job board, and **CDC**, a university career portal with per-campus branding.
- **Built the marketing site and a custom landing-page system for enterprise clients.** Co-branded, domain-routed pages for **BCA** with its 18 university sub-sites, **Google, Deloitte, Gojek, Sephora, Home Credit, KAI** and Ristekdikti, plus the shared interview-invite and candidate-onboarding flows used across client integrations.
- **Modernised the live, revenue-generating monolith** by running the Laravel 5.4 to 5.8 and PHP 7.1 to 7.4 upgrade as a three-year parallel track, so the platform kept improving without freezing feature delivery.
- **Opened a new company capability in job-market data.** Built a seven-source scraping pipeline across LinkedIn, JobStreet, Prosple, GradConnection, Disnaker, Kalibrr and Talentic that feeds ASTRNT's job board, reverse-engineering each site from scratch: GraphQL and JSON APIs, redirect chains and authenticated sessions.
- **Cut manual recruiter work and made the app load faster.** Shrank the front-end bundle by about **92%** through code splitting and a dependency audit, delivered async Excel exports and automated PDF reports, and built WYSIWYG assessment and email builders so recruiters could create content without engineering help. Also built internal admin tools (vouchers, assessments, companies, users) and fixed an XSS risk by sanitising user-supplied data.

- PT. Rumah Sakit Padjadjaran, “Edudok” (Telkom Incubator) · Fullstack Programmer

Sep 2018 - Feb 2019

- **Built core modules for a healthcare platform** (contact management, SMS blast, reservation, screening) serving 6 clinic clients. Applied OOP and SOLID during refactoring to reduce technical debt across all clients.
 - **Helped steer the product’s pivot from B2C to B2B**, rebuilding the landing page and the core architecture around enterprise clinic clients.
- PT. Galamedia Perkasa (online & print media) · IT Developer, Online Division

Aug 2016 - Nov 2017

- **Rebuilt the company’s news portal** (galamedianews.com) with a new frontend, a custom CMS and a Laravel backend. Delivered an HR-management (employee) system on time with full documentation.
 - **Diagnosed and fixed critical TCP, network and server-load issues** on a high-traffic media platform.
- PT Wahana Saabiq & CV Cihanjuang Inti Teknik · Part-Time Programmer

2016 - 2018

- **Built a back-office web and mobile app** (Ionic + CodeIgniter REST API) for a trading company, and a Manufacturing Resource Planning web app (Laravel), both delivered on time with full documentation.

AWARDS & ACHIEVEMENTS

- “**Set Objective, Move Fast” Award** (ASTRNT, Q3 2025). Recognised for delivering significant results that represent the company value. [View certificate →](#)
- “**We Do Excellence & Personal Growth” Award** (ASTRNT, No. 002/CERT/ATI/I/26, 2026). Awarded for outstanding personal and professional excellence. [View certificate →](#)
- Published conference paper and speaker** (SNATI 2017): “Identifikasi Suara Pengontrol Lampu Menggunakan MFCC dan Hidden Markov Model” (co-authored with Esmeralda C. Djamal & Rezki Yuniarti). [View publication →](#)
- UNJANI (2013-2016)** Kaderisasi Division member and Outbound commission member. Led new-member recruitment and coordinated orientation for about 400 incoming students.

EDUCATION

- S.Kom., Informatics

Universitas Jenderal Ahmad Yani (UNJANI), Cimahi · graduated August 2017 · GPA 3.13
Concentration: Artificial Intelligence and Data Mining (thesis on MFCC + Hidden Markov Model voice recognition).

TECHNICAL SKILLS

- Engineering:
testing (Cypress)

OOP · SOLID · Clean Code · Design Patterns · product specification (PRD / design use cases) · code review · E2E
- Languages:

TypeScript · JavaScript (ES6+) · PHP · Python · SQL · Java
- Frontend:

React (16 to 19) · Next.js 16 · Redux · Tailwind CSS · shadcn/ui · Vue 2 · Nuxt 2 · Webpack · cross-browser / offline resilience
- Backend & API:

Laravel (5.3 to 8) · Lumen · Node.js / Express · Prisma · REST API · payments (Stripe, Midtrans) · SSO / OAuth · queue workers
- Data:

MySQL · PostgreSQL · MongoDB · Redis · Elasticsearch · DynamoDB · web scraping / data ingestion
- Cloud & DevOps:

Azure (Blob, Pipelines, Cognitive Services) · AWS (S3, DynamoDB, Elastic Beanstalk) · PM2 · Nginx · Docker · CI/CD · Linux (Ubuntu)
- AI / applied ML:

AI SDKs (Anthropic, OpenAI, Gemini) · Azure Speech scoring · VRA psychometric · TensorFlow.js · academic: HMM · LVQ neural networks · genetic algorithms
- Tools & process:

Git · Jira · Confluence · Azure DevOps · Puppeteer automation · load testing · documentation

All figures traceable to the git commit history behind them. References and the full track record available on request.
