

ANGGA KERSANA MUNGgaran

Senior Backend Engineer · Laravel / PHP + Node.js · 7+ years in HR technology (B2B SaaS)

Cimahi, West Java, Indonesia · +62 813-2423-0307 · anggakersana@gmail.com · portfolio: anggakersana-dev.vercel.app · linkedin.com/in/angga-munggaran · github.com/anggakersanamunggaran

PROFILE

Senior backend engineer with 7+ years inside HR technology at ASTRNT, where recruiters and job applicants used the products I built. I have built and run a B2B SaaS backend across two generations of stack: a Laravel/PHP monolith on MySQL, MongoDB, Elasticsearch and Redis, and the API and service layer behind a Next.js rebuild. My work spans REST API design, queue workers and background jobs, auth and SSO, payments, data pipelines, and database performance work under 2,500 concurrent users. I define the work by writing the product specification, implement it, and keep it running in production. Now open to **senior backend and platform roles**.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer (started as Web Developer; backend-led across the product line) May 2019 - Aug 2026

ASTRNT (astrnt.co) · HR-technology company. Asynchronous video-interview and online-assessment platform for hiring

Full-time · principal contributor: roughly 11,700 commits, 35 repositories, 1,661 Jira tickets held (93% completed).

- Ran a live, revenue-generating monolith and modernised it without freezing the business.** Executed the Laravel 5.4 to 5.8 and PHP 7.1 to 7.4 upgrade as a three-year parallel track (legacy/target branches), so the platform kept improving while customers stayed online.
- Fixed a production performance crisis at 2,500 concurrent candidates.** Traced database saturation to N+1 queries, missing indexes, row-lock contention and third-party calls in the request path, then resolved it with query rewrites, index and lock audits, and moving scoring into background queues.
- Designed and built the API and service layer of the candidate assessment platform.** A Laravel 8 API service (API-QNA) driving the QnA web app: five question engines, a unified session and timer engine, resumable video upload, camera and screen proctoring, and real-time Socket.IO flows.
- Architected the data layer that feeds an AI matching engine.** Built document/CV upload and structured extraction over MySQL, MongoDB and Elasticsearch, the pipeline later used by AI CV scoring and candidate-to-job matching.
- Shipped REST APIs, queues, payments and identity end to end.** REST API design, queue workers and scheduling, payments (Stripe, Midtrans/Veritrans), SSO (SAML 2.0, OAuth), across the recruiter product and the white-label family (Kognisi.id, Popskul, CDC).
- Led the storage and database side of an AWS to Azure migration.** Re-homed object and video storage onto Azure Blob and replaced the AWS DynamoDB activity log with MongoDB, which the platform already ran, because Azure has no managed equivalent. No service downtime.
- Built data-acquisition backends against external systems.** A seven-source scraping pipeline (LinkedIn, JobStreet, Prosple, GradConnection, Kalibr, Disnaker, Talentic) reverse-engineering GraphQL and JSON APIs, redirect chains and authenticated sessions into one ingestion API, plus a Python/Flask service adding VirusTotal scanning and Azure Speech integration.
- Kept the modern rebuild safe and measurable.** Authored 19 PRDs and 30 design use cases, ran a dual-database migration with no cut-over outage, and enforced standards through code review and no-mock E2E testing on the Next.js dashboard rebuild.

PT. Rumah Sakit Padjadjaran, “Edudok” (Telkom Incubator) · Fullstack Programmer Sep 2018 - Feb 2019

- Built backend modules for a healthcare platform** (contact management, SMS blast, reservation, screening) serving 6 clinic clients; applied OOP and SOLID during refactoring to cut technical debt across all clients.

PT. Galamedia Perkasa & PT Wahana Saabiq · Developer (backend-heavy) 2016 - 2018

- Delivered Laravel and CodeIgniter REST backends on time with documentation:** a news portal CMS, an HR employee system, a back-office mobile API, and a Laravel Manufacturing Resource Planning web app.

AWARDS & ACHIEVEMENTS

“Set Objective, Move Fast” Award (ASTRNT, Q3 2025). For delivering significant results that represent the company value.

“We Do Excellence & Personal Growth” Award (ASTRNT, 2026). For outstanding personal and professional excellence.

Published paper and speaker (SNATI 2017): MFCC and Hidden Markov Model voice recognition.

EDUCATION

S.Kom., Informatics **Universitas Jenderal Ahmad Yani (UNJANI), Cimahi** · graduated August 2017. Concentration: AI and Data Mining (thesis on MFCC + HMM voice recognition).

TECHNICAL SKILLS

Backend & API:	Laravel (5.3 to 8) · Lumen · PHP (5.6 to 8.x) · Node.js / Express · Prisma · REST API design · GraphQL (reverse-engineered) · queue workers & scheduling · Socket.IO
Data:	MySQL · PostgreSQL · MongoDB · Redis · Elasticsearch · DynamoDB · database design & query optimisation · data ingestion / scraping
Platform:	Payments (Stripe, Midtrans) · SSO (SAML 2.0, OAuth, Laravel Socialite) · Azure Blob · Nginx · Docker · CI/CD · Linux (Ubuntu)
Languages:	PHP · JavaScript / TypeScript · Python · SQL · Java
Engineering:	OOP · SOLID · Clean Code · Design Patterns · code review · product specification (PRD / design use cases) · load testing · monitoring (Sentry)
