

ANGGA KERSANA MUNGgaran

DevOps / Platform Engineer · Azure & AWS · CI/CD · 7+ years shipping and running production

Cimahi, West Java, Indonesia · +62 813-2423-0307 · anggakersana@gmail.com · portfolio: anggakersana-dev.vercel.app · linkedin.com/in/angga-munggaran · github.com/anggakersanamunggaran

PROFILE

DevOps and platform engineer who has run production for 7+ years across a real product family: web apps, video pipelines, databases and CI/CD. At ASTRNT I led the migration of the platform from AWS to Azure, stood up the per-environment builds and process management for every web app, and re-homed storage and an activity-log database with no downtime. I have diagnosed production incidents under 2,500 concurrent users, owned performance and load work, and shipped the security fixes that came out of it. I write the spec, run the environment, and keep the thing up. Now open to **DevOps, platform and SRE roles**.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer (infrastructure and platform owner) May 2019 - Aug 2026
ASTRNT (astrnt.co) · HR-technology company. Video-interview and online-assessment platform for hiring

Full-time · principal contributor: roughly 11,700 commits, 35 repositories, 1,661 Jira tickets held (93% completed).

- **Led the AWS to Azure platform migration end to end.** Moved hosting and Git integration to Azure DevOps (dev.azure.com) with a beta-az line running in parallel to the AWS environment, then cut over with no service downtime.
- **Standardised process management and deploys across the product family.** Ran public-web and the QnA candidate app under PM2 (public-live, web-qna) with ecosystem.config.js files and pm2-reload deploy steps, and twin build-aws / build-azure scripts so one codebase built against either cloud.
- **Re-homed storage and data where Azure had no direct equivalent.** Moved object and video ingest/out storage onto Azure Blob Storage, and replaced the AWS DynamoDB activity log with MongoDB, which the platform already ran, with no downtime.
- **Built per-environment CI/CD and enforced quality gates.** Azure Pipelines per app with beta/staging/production builds, a no-mock E2E policy with Cypress, and Claude Code skill gates that made reviews consistent on the flagship rebuild.
- **Fixed a production incident at 2,500 concurrent candidates.** Traced database saturation to N+1 queries, missing indexes, row-lock contention and third-party calls in the request path; resolved with query rewrites, index and lock audits, and moving scoring to background queues.
- **Owned performance and security on a live product.** Cut the front-end bundle about 92% via code splitting, set up Sentry monitoring, load-tested under concurrency, and fixed an XSS risk by sanitising user-supplied data.
- **Operated external data pipelines safely.** Built and ran a seven-source scraping fleet (LinkedIn, JobStreet, Prosple, GradConnection, Kalibr, Disnaker, Talentic) feeding one ingestion API, plus a Python/Flask service that added VirusTotal file and link safety scanning.
- **Modernised a monolith as a parallel track.** Laravel 5.4 to 5.8 and PHP 7.1 to 7.4 across three years of parallel branches, so infrastructure improved while feature delivery never froze.

Earlier roles (2016 - 2019) 2016 - 2019
• **Diagnosed and fixed critical TCP, network and server-load issues** on a high-traffic media platform (Galamedia Perkasa), and delivered Laravel web apps with documentation for six clinic and trading clients.

AWARDS & ACHIEVEMENTS

“Set Objective, Move Fast” Award (ASTRNT, Q3 2025). For delivering significant results that represent the company value.
“We Do Excellence & Personal Growth” Award (ASTRNT, 2026). For outstanding personal and professional excellence.

EDUCATION

S.Kom., Informatics **Universitas Jenderal Ahmad Yani (UNJANI), Cimahi** · graduated August 2017.

TECHNICAL SKILLS

Cloud:	Azure (DevOps, Pipelines, Blob Storage, Cognitive Services) · AWS (S3, DynamoDB, Elastic Beanstalk) · cloud migration · cost-aware re-homing
CI/CD & run:	Azure Pipelines · PM2 process management · Nginx · Docker · Linux (Ubuntu) · Git / GitFlow · Sentry · load testing
Data:	MySQL · MongoDB · Redis · Elasticsearch · DynamoDB · query optimisation · backups / activity logs
Security & quality:	input sanitisation · SSO (SAML 2.0, OAuth) · VirusTotal API · no-mock E2E · monitoring · incident response
Languages:	PHP · JavaScript / TypeScript · Python · Bash · SQL

All figures traceable to primary sources (Git commit history and Jira). References and the full audited track record available on request.
