

ANGGA KERSANA MUNGgaran

Quality Engineer / SDET · E2E, performance and release quality · 7+ years in HR technology

Cimahi, West Java, Indonesia · +62 813-2423-0307 · anggakersana@gmail.com · portfolio: anggakersana-dev.vercel.app · linkedin.com/in/angga-munggaran · github.com/anggakersanamunggaran

PROFILE

Quality engineer who has spent 7+ years protecting a product that candidates use under time pressure, on unknown devices, over weak connections. At ASTRNT I built quality in from the start rather than bolting it on: I wrote the acceptance criteria in the spec, enforced a no-mock E2E policy with Cypress, and made release gates automatic. I ran performance and load work under 2,500 concurrent users, added in-product video-quality checks that stop unusable recordings before they reach a reviewer, and closed security gaps before they reached production. I can test it, automate it, and explain the failure. Now open to **QA automation, SDET and quality-engineering roles**.

PROFESSIONAL EXPERIENCE

Senior Full-Stack Engineer (quality owner across the product line) May 2019 - Aug 2026
ASTRNT (astrnt.co) · HR-technology company. Video-interview and online-assessment platform for hiring

Full-time · principal contributor: roughly 11,700 commits, 35 repositories, 1,661 Jira tickets held (93% completed).

- **Turned release quality into an enforced, automated gate.** Established a no-mock E2E policy with Cypress and code-review skill gates on the flagship Next.js rebuild, so behaviour was verified against the real stack, not mocked assumptions.
- **Made completeness measurable instead of assumed.** Ran explicit feature-parity tracking against the legacy V1 during a ground-up rebuild, so every replaced feature had a tracked, checkable status before go-live.
- **Wrote the spec that doubles as an acceptance baseline.** Authored 19 PRDs and 30 design use cases that defined expected behaviour, then verified the shipped work against them, closing the loop between requirement and test.
- **Fixed a production performance crisis at 2,500 concurrent candidates.** Traced database saturation to N+1 queries, missing indexes, row-lock contention and third-party calls in the request path, then verified the fix with query rewrites, index and lock audits, and queue offloading.
- **Added quality checks inside the product itself.** Real-time video-quality checks warn a candidate to retake instead of silently submitting unusable footage, and a camera and microphone device-testing flow verifies hardware before an exam starts.
- **Tested across the hard matrix: browsers, devices, networks.** Cross-browser discipline (Safari, Firefox, Edge, legacy Node), camera and mic flows, mobile lockout, resumable uploads and offline resilience were tracked requirements on the candidate app, not afterthoughts.
- **Caught security issues before production.** Fixed an XSS risk by sanitising user-supplied data, and gated sensitive flows with explicit consent, SSO (SAML 2.0, OAuth) and per-client access rules.
- **Documented failures honestly.** Kept specs that record their own failures and design reversals, including a security gap flagged before it could reach production, so the whole team learns from what breaks.

Earlier roles (2016 - 2019) 2016 - 2019
• **Delivered on time with full documentation, twice over** (Galamedia HR system, Wahana Saabiq apps), and diagnosed critical network and server-load issues on a high-traffic media platform.

AWARDS & ACHIEVEMENTS

“Set Objective, Move Fast” Award (ASTRNT, Q3 2025). For delivering significant results that represent the company value.
“We Do Excellence & Personal Growth” Award (ASTRNT, 2026). For outstanding personal and professional excellence.

EDUCATION

S.Kom., Informatics **Universitas Jenderal Ahmad Yani (UNJANI), Cimahi** · graduated August 2017.

TECHNICAL SKILLS

- Test automation:** Cypress E2E · no-mock testing policy · API contract checks · cross-browser test matrix · CI/CD quality gates (Azure Pipelines)
- Performance & reliability:**load testing · query optimisation (N+1, indexes, locks) · queue offloading · resumable upload · offline resilience · monitoring (Sentry)
- Product-layer QA:** spec-driven acceptance (PRD / design use cases) · feature-parity tracking · in-product video-quality checks · device-testing flows
- Security QA:** input sanitisation (XSS) · consent gating · SSO (SAML 2.0, OAuth) · VirusTotal scanning
- Languages & tools:** TypeScript · JavaScript · PHP · Python · SQL · Jira · Confluence · Git · Docker · Linux

All figures traceable to primary sources (Git commit history and Jira). References and the full audited track record available on request.
